

BATH HOUSE / RESTROOM PROCEDURE

The sanitary waste system is off a unique recycling design that has been installed uses no water to protect our environment and to minimize environmental impact.

- The toilet uses no water or chemicals
- Waste is composted in the equipment below the floor

Please familiarize yourself and your guests with the composting toilets directions for use as posted

- **Please push the button at the rear top of the toilet once before use and once after use.**
- **Do not throw cigarettes, plastics, bottle, cans or feminine products into the recycling toilet.**
- **Sealable – liquid proof bags are provided for feminine products to CARRY OUT.**

Dishwashing

- Multiple areas for dishwashing are provided within the common area for all to share
- Dishwashing soap and scrub pads are provided for your use.
- Grey bus pans are provided for transporting dishes, etc to the dishwashing area
- Green drying racks are provided under the dish wash sinks
- Please clean food scraps from the sink drainers after use.

Hot water use

- Hot water is provided through a heating system that ONLY provides hot water on demand. **Hot water at the sinks and showers may take several minutes to reach you at the point of use.** NO hot water is stored in a tank thus saving energy by not continuously heating water when there is no demand.

Water: Safe potable water is available at the Bath House for cooking and drinking. There are food grade five (5) gallon & smaller containers to transport water located in each building's kitchen area, be sure you wash them before use

CLEAN-UP of the BUILDING – your responsibility

Do not leave trash in the Bath House / Restrooms or food scraps in the dish sinks. **Anything brought in by a guest must be removed by that guest.** This includes all leftover soap left in the showers, food and trash.

A janitor will sanitize the building after your departure
